## **TRAIN EXAMINATIONS – EXTRA PRECAUTIONS DURING THE WOLO RISK PERIOD (OCTOBER TO MARCH)**

### **ATTENTION: All train examiners**

Rollingstock can contribute to track buckles.

Between October to March each year, higher temperatures increase the risk of track buckles on welded track due to expansion of the rails.

Rollingstock with poorly tracking or hunting bogies can apply additional lateral force to the rails that disturb the track structure under these conditions. This can contribute to track buckling under a train or after the passage of a train.

### **Train examinations: Passenger and freight trains**

To reduce the track buckling forces from rollingstock, the following components should be inspected more closely during the WOLO risk period:

#### **Constant contact side bearers (where fitted)**

Check for wear of non-metallic components, and that the side bearers are seating correctly with no gap (see Figure 2). This applies mainly to freight, but also applies to passenger rollingstock such as NHA bogies under XPT and J type bogies under S, K and C sets.

#### **Friction wedges**

Check for excessive wedge rise, condemn notch thickness, and wear plate condition.

#### **Wheel profiles**

Check for excessive flange wear and arises.

#### **Overloading or unbalanced loading**

Check For spring deflection, obviously incorrect loading of wagon including over decks of multipack wagons.

*Continued on the next page*

*Continued from the previous page*

### **Evidence of hunting**

Tell-tale signs of hunting are any of the following:

- fresh bolster gib wear (see Figure 1)
- wear between the side of the friction wedge and bolster pocket (see Figure 1)
- fresh wear between the axle box or the bearing adaptor and bogie side frame
- melting of plastic elements in the constant contact side bearers due to friction heating (see Figure 3).

Freight wagons with the following hunting defects should be marked off, or reduced to 50km/h maximum speed, when a WOLO has been declared.

**Figure 1:** High gib/side frame wear and friction wedge lateral wear

**Figure 2:** Constant contact side bearer with point contact

*Continued on the next page*

Continued from the previous page

**Figure 3:** Constant contact side bearers with melted plastic blocks

### **What to do if defects are detected or reported**

Defects are usually identified via passenger complaints (for passenger trains), and drivers and wayside staff reports and observations, including roll-by inspections (for freight trains).

Any passenger vehicle, freight train or locomotive should undergo corrective action if suspected of hunting.

Freight vehicles showing any of the above defects should be marked off, or operate at reduced speed until corrective action is taken.

The reduced speed shall be the maximum permitted track speed not exceeding 50km/h when a WOLO has been declared.

The reduced speed when a WOLO has been declared is published in the Train Operating Conditions Manual General Instruction Pages, Section 3 Page 5.

**Note:** These items form part of the normal train examination procedures, but are especially important at this time of year when track buckles are a greater risk. Please refer to your examiners manuals for the inspection procedure and limits for these components and, if you have any questions, speak with your supervisor.

## TRACK DISTURBANCE BETWEEN OCTOBER AND MARCH

### **ATTENTION: All engineering and construction staff who work on or about the track**

Disturbance of the track during the period October to March can cause track misalignments (track buckles).

Be aware of:

- Bumping of the track (e.g bumping the track with a front-end loader).
- Knocking down or removing ballast profile (e.g running along the ballast shoulder in a truck).
- Undermining the ballast profile by excavation (e.g excavating a trench beside or under the track).

### **Report all track disturbances**

If the track is disturbed, report it immediately to local track staff.

Planned work to be advised to email address [PermissionToDisturb@transport.nsw.gov.au](mailto:PermissionToDisturb@transport.nsw.gov.au)

## **RICHMOND (RICHMOND LINE) – PROVISION OF SPEED CHECKING ON RD5 SIGNAL**

Since **Saturday, 27 January 2018**, the following work has been implemented:

- Speed checking has been provided on RD5 Signal for running movements into Platforms 1 & 2 at Richmond.
- 5(M)A Route - Main to Platform 2 provides a timed Caution aspect (Green/Red – Trainstop Up)
- 5(M)B Route – Main to Platform 1 provides a timed Caution Turnout aspect (Yellow/Red – Trainstop Up)

A train approaching RD5 Signal will now be speed checked and if travelling at a speed of not more than 20km/h, the trainstop will lower, authorising entry into the appropriate platform..
