### **Special instructions**

#### **Right of way indicators**

There are right of way indicators above the guard's indicators for the Up platform. Up trains must not depart from the platform before the movement is authorised by the:

- guard's indicator, and
- right of way indicator.

If the right of way indicators go out before the rearmost vehicle has passed the Sydney-end indicator, the Guard must signal the Driver to stop.

### **Operation of 106 Points**

106 Points are set by the signaller but operated locally by a Qualified Worker using 106 points pushbutton unit. The pushbutton unit consists of an SL locked box that contains an 'Operate Points' pushbutton and a 'Points Free' indicator (flashing green). Instructions for working trains into or out of the Perway Sidings are inscribed inside the pushbutton unit locked box. A telephone is also provided. See pushbutton layout below.

### **Operation of 106 points by setting signal routes**

- The Qualified Worker will contact the signaller to discuss the train movement.
- The signaller will set 21(S)A, 21(S)B or 26(S) route as required.
- The signal route on the ATRICS control panel will set but the signal will remain at stop (i.e. 106 points have not operated) and the 'Points Free' indication on 106 points pushbutton unit will flash green.
- When advised by the signaller, the Qualified Worker will visually ensure the track over the points is clear and any approaching track vehicles are stationary. Observe the 'Points Free' indicator is flashing green.
- Depress and hold the pushbutton for 2 seconds to operate the points.
- The signal will clear for the selected route once the points are in the correct position.

#### **Operation of 106 points by calling the points**

- The Qualified Worker will contact the signaller to discuss the train movement.
- The signaller will call 106 points either 'normal' or 'reverse' as required.
- The points indications on the ATRICS panel will be unchanged (i.e. 106 points have not operated) and the 'Points Free' indication on 106 points pushbutton unit will flash green.

- When advised by the signaller, the Qualified Worker will visually ensure the track over the points is clear and any approaching track vehicles are stationary. Observe the 'Points Free' indicator is flashing green.
- Depress and hold the pushbutton for 2 seconds to operate the points.
- On the ATRICS control panel 106 points will indicate either 'normal' or 'reverse', once the points are in the new position.

#### Note

106 points must be restored to the normal position on completion of the train movements.
