

Safety Advice

Sharing information to improve Safety

Target audience

All Sydney Trains' workers, contractors and visitors who access the Hamilton Precinct (end of Swan Street, Hamilton).

The Issue

Building 2 at Hamilton Precinct is in a partially collapsed state, with work underway to mitigate the potential for collapse and allow for the safe demolition of the building.

Roof sheeting and other loose materials have been removed from the remaining structure and there is an increased risk of collapse during significant weather events.

Figure 1: Illustrates the changes to traffic flow and placement of barriers to prevent access.

What you must do

Following a risk assessment, controls have been introduced to mitigate risks to staff, operations and assets. These controls include temporary fencing, additional signage and the establishment of alternate traffic routes to prevent exposure to the envelope of the building in the event of collapse.

It is important to be aware of and adhere to the following:

- All pedestrian access to and from the Precinct will be via the pedestrian gate towards the Station, adjacent to the old Signal Box (*Beaumont Street Entrance*).
- While vehicle access is allowed, please adhere to the alternate traffic routes that are in place.
- No parking is allowed adjacent to any of the temporary security fencing surrounding the building.
- There shall be no loitering around the building.
- Follow all safety signage on site.
