## Single light colour light signals with staggered marker light

Single light colour light signals with a staggered marker light are:

- automatic signals, or
- distant signals.

### Automatic signals

Automatic single light colour light signals have a red marker light.

The marker light is lit if:

- the signal is at **STOP**, or
- the main light fails.

### Distant signals

Single light colour light distant signals have a yellow marker light that is lit if the main light fails.

Some distant signals indicate **STOP** if the line between the distant signal and the next signal is occupied.

Distant signals may have a signal identification sign with the same signal identification as the signal ahead. The identification sign includes the word **DISTANT**.
